

How will the courses be taught with the Flipped Classroom Method ?

Dear Students,

In the 2022-2023 academic year, some courses will teach with the Flipped Learning model.

To reach the contents of the courses, which will teach with the flipped classroom model, you will register via flippedlearning.neu.edu.tr/ during the registration process. You must use your university mail account, which is studentnumber@std.neu.edu.tr .

- The **outline** for each course is found among the course materials. By looking at the course outlines, you can find out what topics will be taught each week, what will be done during the class hours, and what is expected from you each week. The course outlines also include the **criteria for evaluating** the course.
- The course instructor will upload the video into the weekly folder found on flippedlearning.neu.edu.tr/ **at least 48 hours before** the course.
- You will be able to watch the videos from flippedlearning.neu.edu.tr/ by accessing the page of your course, and you will also be able to **revise** the topic as much as you want by watching the videos.
- You will also **take notes** about the things you did not understand while watching the videos. Suppose the instructor has posted a quiz with the videos. In that case, you will answer them and complete the necessary preparations using the other materials the instructor has posted.
- Your instructor **will not explain the topic** in the classroom again, as explained in the video. Watching the videos would help if you did the necessary preparations before the class.
- There will be educational activities (discussions, brainstorming, technology-based quizzes, problem-solving, simulation, etc.) during class hours, which will make you participate actively in the class or virtual class.
- Your instructor will not directly answer your questions, but he/she will only guide you to **find solutions**.

Good Luck
